EchoLynk Follow-Up Intelligence Layer

100 Actions/Day. Zero Guessing.

WHO NEXT → the lead most likely to reply / book ✓

WHAT PLAYBOOK → the right routine for this situation ✓

WHAT MESSAGE → the exact message to send (in your voice) ✓

WHY → clear reason codes (history, timing, risk) ✓

Break-even math: $15k pilot ≈ 6 deals at $2.5k AOV (client-specific)

[1] Ground Truth: Calibrate on Your Wins

We define "good opportunity" in *your* business **before sending anything**.

INPUT

- Lead status + last touch
- Notes + conversation history
- Outcomes (won / lost / booked / no-reply)

WHAT WE DO

- Normalize messy fields + notes (CRM or spreadsheet)
- Align scoring with your team's real "wins"
- Set prioritization rules + guardrails

OUTPUT

- A ranked daily queue that matches your reality
- "Who to contact first" is reliable on Day 1

No generic scoring. Calibrated to your outcomes.

[2] Human-in-the-Loop (15 min/day)

~100 AI suggestions/day with clear reasoning and full control.

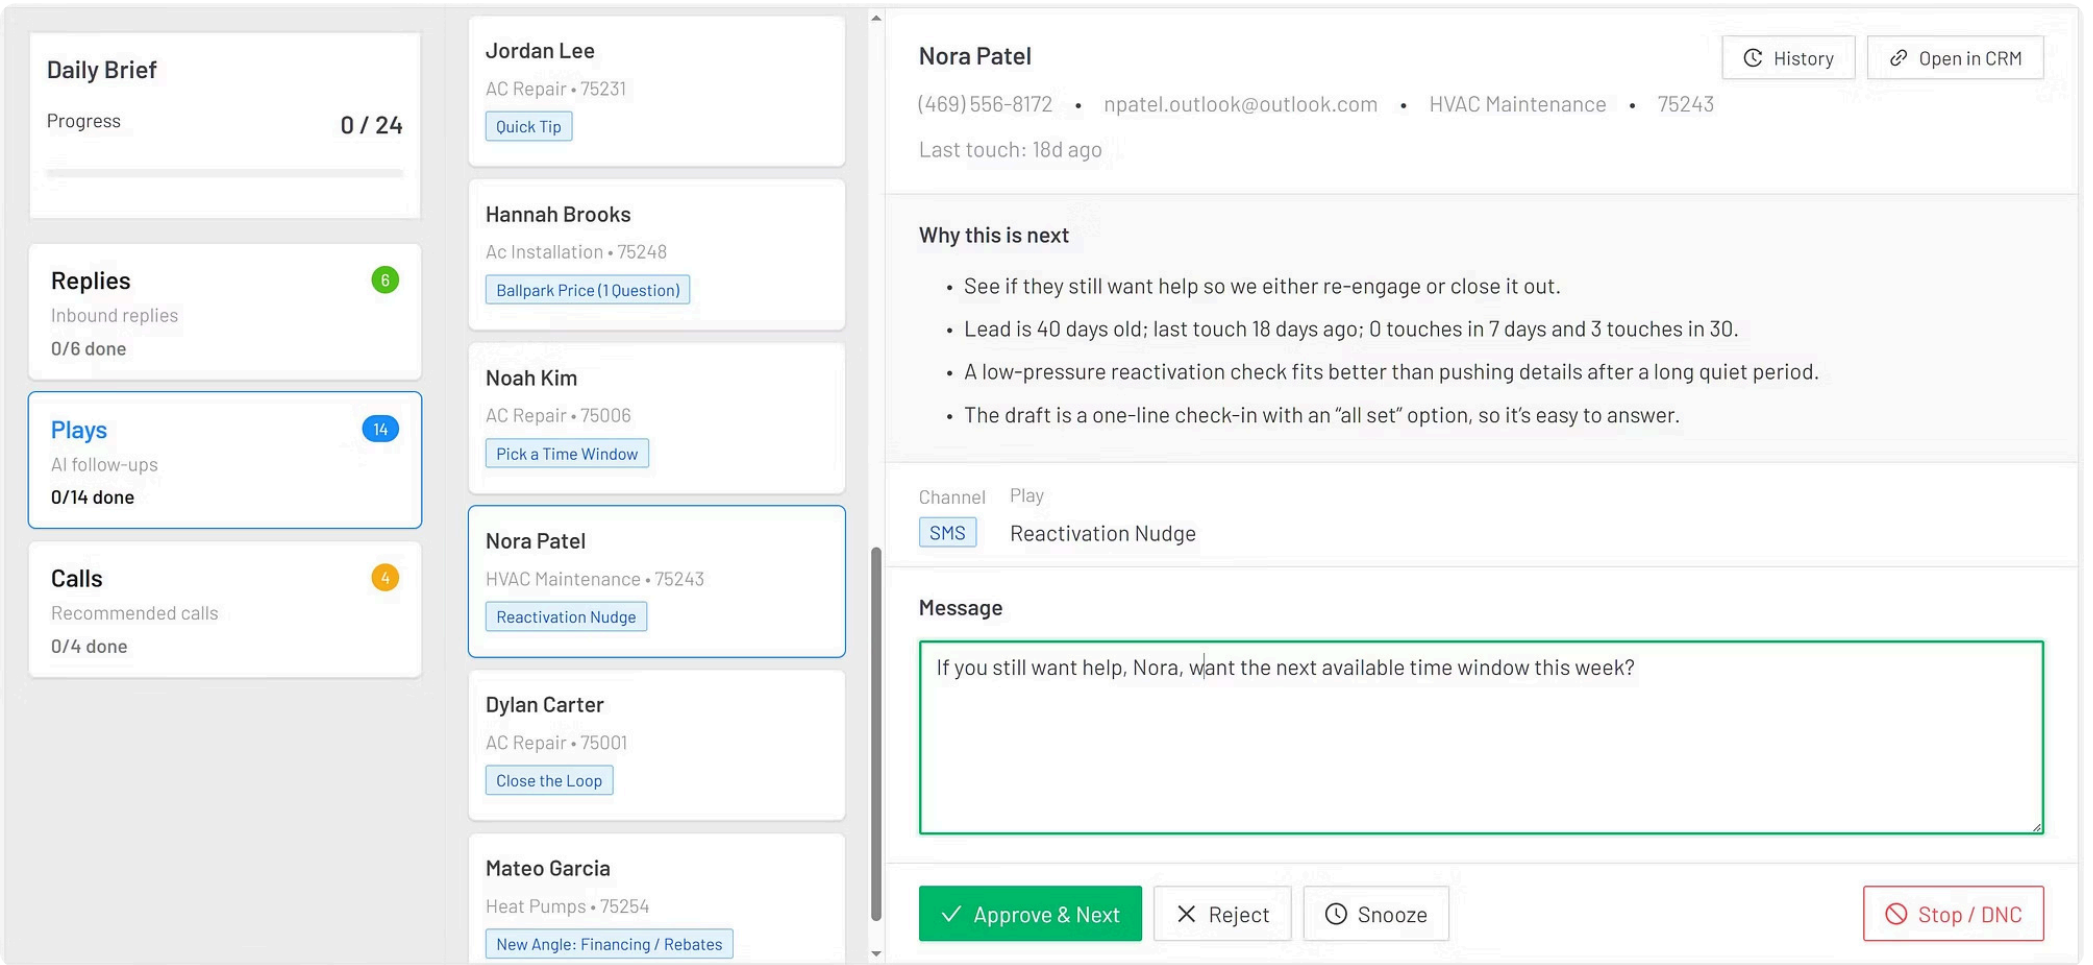
Review one-by-one. Approve in seconds. Send through your CRM.

How it trains (fast):

You or your SDR/CSR reviews the daily queue. Every approval/edit becomes training data.

- **Approve & Next** → send + move on
- **Edit** → lock your voice/tone
- **Reject** → teach what "bad" looks like
- **Snooze** → wrong timing
- **Stop / DNC** → compliance guardrail

Speed: 100 actions/day in **~15 minutes** **≈33× faster than manual follow-up**



Fast learning. Full control. No black box.

[3] Sprint to Autopilot

From 15 minutes/day review to **Automated follow-up at scale** — in 90 days

Once approval rate is consistently high (e.g. 90%) → **Enable Autoplay**

Autoplay does the work:

- Runs playbooks automatically
- Detects intent + escalates replies to humans
- Logs outcomes → improves future touches

Playbook	Status	Suggested (14d)	Succeeded (14d)	Corrected (14d)	Autoplay Since	Auto-sent	Actions
Ballpark Price (1 Question) Salvage • give ballpark	Training	28	71%	Edited: 21% Err: 7%			—
Social Proof Nudge Salvage • build trust	Ready	180	92% 9-day streak	Edited: 7% Err: 2%			Enable Autoplay
New Angle: Financing / Rebates Nurture • reactivate	Ready	95	92% 12-day streak	Edited: 7% Err: 1%			Enable Autoplay
Estimate: What's the blocker? Estimate • find blocker	Ready	220	96% 14-day streak	Edited: 4% Err: 0%			Enable Autoplay
Reactivation Nudge Nurture • reactivate	Autoplay	145	93% 11-day streak	Edited: 6% Err: 1%	Jan 8, 2024	87	Pause View Log
Repair vs Replace (2 Questions Total) Nurture • collect detail	Autoplay	168	93% 13-day streak	Edited: 5% Err: 1%	Jan 12, 2024	142	Pause View Log
Warranty / Guarantee Clarity Estimate • build trust	Paused	95	82%	Edited: 11% Err: 7%	Jan 5, 2024	68	Resume View Log

Once playbooks are on Autoplay, follow-up becomes a **compounding revenue system**.

Autoplay = Revenue capture on repeat — without daily labor.

Give us **15 minutes/day** for **90 days** — we'll build your revenue recovery engine

Bonus: Recent Case Study

From dormant leads → Real conversations in days

1st Week Results

~21% reply rate
~30% reactivation rate (engaged conversations from dormant leads)
~100 actions/week → accelerating
~100% ROI (2 sales @ $5k)

What drove the lift

→ Calibrated on prior wins + outcomes
→ Daily best-next-action queue consistency
→ Human-in-the-loop approvals → fast voice learning

What this could mean for you (illustrative)

If you have 25,000 dormant leads:
25,000 × 70% deliverable × ~2.0% escalated × 35% close × $3,000 AOV

≈ $367,500 in Potential Recovered Revenue

Start the 90-day "Dormant → Escalated" pilot
